

PLE 42267 (Coil Gondola)

Kitbashed, detailed, not judged

This car started as an AHM gondola with a clamshell cover. The prototype cars were built in 1967 and soon lost these covers due to maintenance issues. The first thing I did was to remove the cover. The interior was crude so I patched holes in the floor and built a cradle for the coils. This also helped conceal the car's weight. Appropriate ladders, grab irons, and steps were added. The car was painted and lettered per a prototype photograph.
