

## PS "PENNSYLVANIA"

Craftsman kit, not judged

This car was built from a solarium lounge kit produced by Walthers many years ago. I purchased the kit around 1975 and assembled it at that time. I recently repainted the car as part of the Pennsylvania Southern business car fleet.

The kit consisted of stamped metal sides with rough metal end castings. The castings required considerable filing and sanding to be usable. The underframe is well detailed. The kit had parts for a center sill, various battery and air conditioning boxes, brake cylinders, spicer generators, and steam traps. As with the ends, the various castings all required work to improve their appearance.
